

# Minor Report 1

Gregor Robertson

01 Nov 2016

## Progress This Week

So far this week I have:

- Created a git repository at: <https://github.com/gregJohnRob/FourthYearProject>
- Managed to convert the Function Pass version of my code to a Module Pass thanks with help from [2]
- Created code to get all of the annotations in a program with help from [1]
- Finished setting up the reporting system for now
- Decided to use `__attribute__((annotate("")))` for getting the annotations from high level C to the IR

## Aims For Next Week

I feel that it would be best to discuss with you what you think the best move would be. However I believe that I should:

- Look into how LLVM constructs the individual instructions **Easy**
- How to extract information from individual instructions **Easy**

## Questions

I do not have any questions for you at the moment. However, I will try to think of some for tomorrow.
